

CALCULATING YOUR GRADES

Are you trying to figure out what you need to make next semester to get the grade you want? I wanted to share with you the way semester grades and final grades are computed.

How to calculate your semester grades:

Multiply: Q1 grade* X 0.475 = ____

Multiply: Q2 grade* X 0.475 = ____

Multiply: Midterm grade X 0.05 = ____

Add those answers together and this equals your **1st semester grade.**

For 2nd semester, do the same.

Multiply: Q3 grade* X 0.475 = ____

Multiply: Q4 grade* X 0.475 = ____

Multiply: Final grade X 0.05 = ____

Add those answers together and this equals your **2nd semester grade.**

How to calculate your grade for the year:

Semester 1 grade + Semester 2 grade = ____

Divide that total by 2

= **Your grade for the year**

***Make sure you use the grade from the comprehensive progress report and NOT the rounded grade on your report card (ex. 85.65%, not 86%).**

I hope this helps. Let me know if you have any questions.
